Green Fence

FENCE YOURSELF WITH IVY IN ONLY ONE DAY !

Green Fences are rigid fence panels pre-planted with natural ivy. The plants are grown in a planter filled with substrate, placed at the bottom of the panel. Upon delivery, Green Fence panels are already completely covered with ivy.

You can therefore enclose and green your garden boundaries with a single product ! Green Fences offer security and privacy in the blink of an eye at a competitive price.

We offer three sizes, subject to availability :

- Small : L 250cm x H 100/120cm
- Medium : L 250cm x H 130/150cm
- Large : L 250cm x H 180/200cm

MAIN USES OF THE GREEN FENCE

A vibrant, competitive, thin blackout solution that is extremely easy to maintain.

- **Street front and side views** : Instant privacy.
- For enclosing **city gardens** and **commercial car parks** : Space saving compared to hedges.
- For **front gardens of shops or offices** : Instant maturity.
- As a cover for **containers in housing estates** : Ivy does not attract graffiti.
- As a **replacement for aluminium or composite panels or gabion fences** : More economical, self-repairing effect of ivy, no heat storage.
- Local alternative to **evergreen hedges** (cedars, cherry laurels).

INSTALLATION GUIDE

Tips :

- Can be installed in all seasons, except during frosts and heatwaves.
- Suitable for all soil types - Add 10cm of Rhine sand if the soil is clayey.
- To lighten the soil, we recommend adding a bag of professional potting soil (70 litres per panel) to speed up recovery.
- Allow 2 people per panel to handle them : each panel weighs 40 to 50kg.
- **For a final height of 100cm / 130cm / 180cm :**
 - Dig a trench measuring 25cm x 25cm.
 - Dig a hole with an auger (20cm in diameter) 50 to 70cm deep every 2.50m, depending on the type of soil and the desired final height.
 - Install the first stake using quick-setting concrete.
 - Install the first panel with the clamp, after removing the planter.
 - Install the second stake... and so on.
 - Fill the trench with soil.
- **For a final height of 120cm / 150cm / 200cm :**
 - Loosen the soil where the root ball will be placed.
 - Dig a hole with an auger (20cm in diameter) 50 to 70cm deep every 2.50m, depending on the type of soil and the desired final height.
 - Install the first stake using quick-setting concrete.
 - Install the first panel with the clamp, after removing the planter.
 - Dig 5 to 10cm of soil on each side.
 - Install the drip irrigation system (Gardena compatible) and apply the slow-release fertiliser supplied with the Green Fence panels.

GREEN FENCE

MAINTENANCE GUIDE

*n*actory

The ideal solution for quick and easy maintenance !

- Prune once or twice a year – in June and September.
 - Use the fence as a guide.
 - Pruning ivy only requires a light hedge trimmer.
- Keep the root ball moist for the first 6 months – then only in hot weather.
